- **Epic Monochrome**

Mysterium-X Monochrome Sensor.

Native ASA 2000.

Increased net resolution (Removal of the debayer process, so every single individual pixel is used for luminance / image data)

New Low Pass Filter with to accommodate the reduced pixel pitch (1x1 vs 2x2 Bayer)

"5K cameras measure an accurate 4K resolution after Debayer, and most 1080p cameras net only an accurate 1.2-1.6k image"

"greater light sensitivity and tonal transfer in gradients, far exceeding the monochromatic quality of a desaturated color image.

same framerates as std Epic

\$42,000 (brain only) includes upgrade to Dragon Monochrome Sensor spring 2013.

David Fincher is shooting his current project solely on Epic-M Monochrome cameras as we speak.

Preorder now, Ships October 1st.

NEWS / GEAR

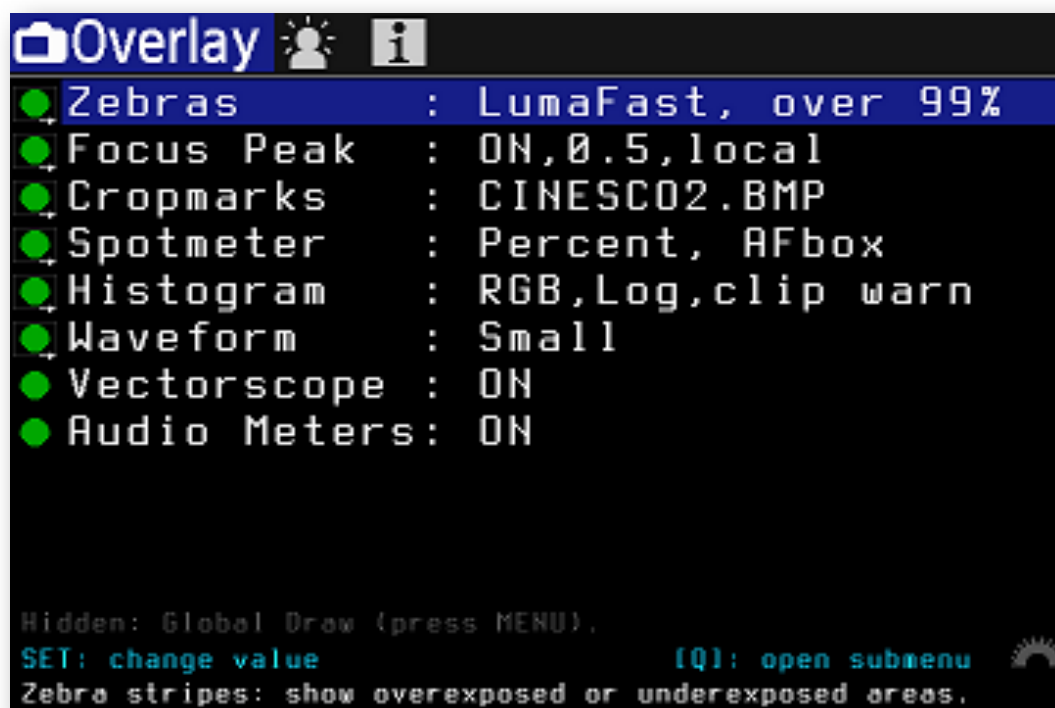

- MagicLantern.fm - First alpha version for 5D Mark III is ready!

This first alpha version is based on v2.3 core and only has a small feature set, like zebras and focus peaking (see screenshot). It will not attempt to change any Canon settings or do any kind of permanent firmware modification. This also means the autoboot feature does not work yet - you will have to load Magic Lantern every time by running Firmware Update from Canon menu.

Since the 5D mark III has two card slots, we recommend running Magic Lantern from a small SD card that stays in the camera. All recording can take place on CF cards. The CF cards don't have to be bootable or prepared in any way, and you can freely swap and format them without problems.

What's next?

Our goal is to have a rock solid and feature-complete port of Magic Lantern for 5D Mark III in the upcoming version 2.4. We are starting today with a minimal feature set, and once you, the testers, convince us that it's very stable, we can gradually add more features. The 5D mark III version will remain in alpha status until all important features can be fully ported.
