- **Canon : Picture Style**

Canon today announces the release of a new in-camera Picture Style pre-set for its range of EOS DSLRs. Created following direct feedback from video enthusiasts, the new Picture Style, called Video Camera X-series-look, enables users to capture EOS Movie footage with lower contrast levels, allowing for easier colour grading during post production processes.

- Similar to that available in Canon's range of X-series camcorders, the new Picture Style works by lowering colour saturation levels and contrast during filming. This makes it ideal for videographers during post production grading processes, especially if complementing with pre-existing footage shot with Canon's X-series models, or alternatively for those who instantly want to add atmosphere to Full HD movies. In addition, the new Picture Style can also be applied to still images captured in RAW or JPEG formats.
- The new Picture Style can be downloaded now from: <http://software.canon-europe.com/>

- **Odyssey7 \$1295 (US Price) - Initial Shipments of the Odyssey7 are planned for November 2013**

- Compressed Codecs Now INCLUDED with Odyssey!
- Based on customer feedback at NAB, Convergent Design has made some significant changes and is now announcing full pricing for the Odyssey7 and Odyssey7Q.
- Most notably, DNxHD and any future supported compressed codecs (up to 1080p60 422) will now be included at no additional cost in the base price of the Odyssey. There is no additional firmware option to purchase for DNxHD support. Simply insert a Convergent Design SSD into the monitor and you have activated recording features in both Odyssey7 and Odyssey7Q.
- In addition, Odyssey7 will now be a gorgeous 7.7" OLED monitor with compressed recording capabilities only. Any additional extra cost options and features will ONLY be available on the Odyssey7Q. This makes Odyssey7 a simple solution for DSLR and broadcast, and avoids confusion between it and it's 7Q counterpart.
- Convergent Design is offering all extra cost options and features available to Odyssey7Q customers at a full-license rate, as well as a per-day rental fee, and is reflected as such in the pricing chart below. While the Odyssey7 and Odyssey7Q monitors and 2.5" SSD media are available through our large Dealer Network, recording options are accessible via the Convergent Design website 24/7 - giving users ultimate flexibility along their journey.
