

NEWS

- [EPIC-S...](#)

EPIC-S is dependent on a few things...

- 1. EPIC-X finished and shipping most of the orders.**
- 2. The rework of the camera given less electronics and features.**
- 3. Cost saving advantages from a mature assembly process and efficiency of production techniques.**

We expect EPIC-S to be in production in Fall of this year. That presupposes no more supply chain surprises

I expect the EPIC-S to be in the \$12-\$13K range.

CINEGEAR

- [HORSEMAN TS-pro](#) Tilt Shift mount

The HORSEMAN TS-Pro is designed to allow using tilt/shift techniques with conventional taking lenses. It supports various lenses for 35mm DSLRs, medium format cameras and M39 mount. When it is used in combination with a still camera lens with a large image circle, it enables the cameraman to utilize tilt/shift techniques with sufficient margins for imaging creativity that was never before possible in video application. *Lenses used for tilt/shift movements must have image circles covering cameras' image sensor sizes.

- Camera Mounts: PL, Micro 4/3t, Canon EOS, Nikon Fz
- Lens Mounts: Pentax 645, Mamiya 645, M39, Canon EOS, Nikon F
